

# Read & Publish agreements

## A cost-neutral transition to Open Access

Available to libraries and library consortia worldwide, our cost-neutral Read & Publish agreements offer:

- **uncapped fee-free publishing of Open Access research articles** for **corresponding authors** in our hybrid journals and our fully Open Access journals - Disease Models & Mechanisms and Biology Open
- **unlimited access to our hybrid journals** - Development, Journal of Cell Science and Journal of Experimental Biology - and their archives dating back to 1853

### Read

an unlimited number of articles going back to 1853

### Publish

an unlimited number of Open Access articles

## What our librarians say

“ One of the best Read & Publish agreements maintained by the library at the University of Seville is with The Company of Biologists. ”

Victor M. Moya-Orozco, Librarian, University of Seville, Spain

“ The agreement further advances open access research and scholarship at MSU. Authors' published work will be available to a larger audience because it is not behind the barrier of an online paywall. ”

Rachelle M. McLain, Montana State University, USA

### Transparent and cost-effective pricing

Pricing is based on current subscription spend, plus the annual average article processing charges (if any) paid over the previous three years. Flat rate pricing is available to institutions that do not currently subscribe. Multi-year agreements are also available.

### Ease of administration and budgeting

A single fee covers both reading and uncapped publishing, thereby reducing the administrative burden of separate budgets and payments. It is also easy to switch from a subscription to a Read & Publish agreement.

### Easy compliance with funders' Open Access mandates

With unlimited OA publishing for all corresponding authors under CC BY licence terms, our Read & Publish agreements support institutions and researchers working to comply with funder mandates.

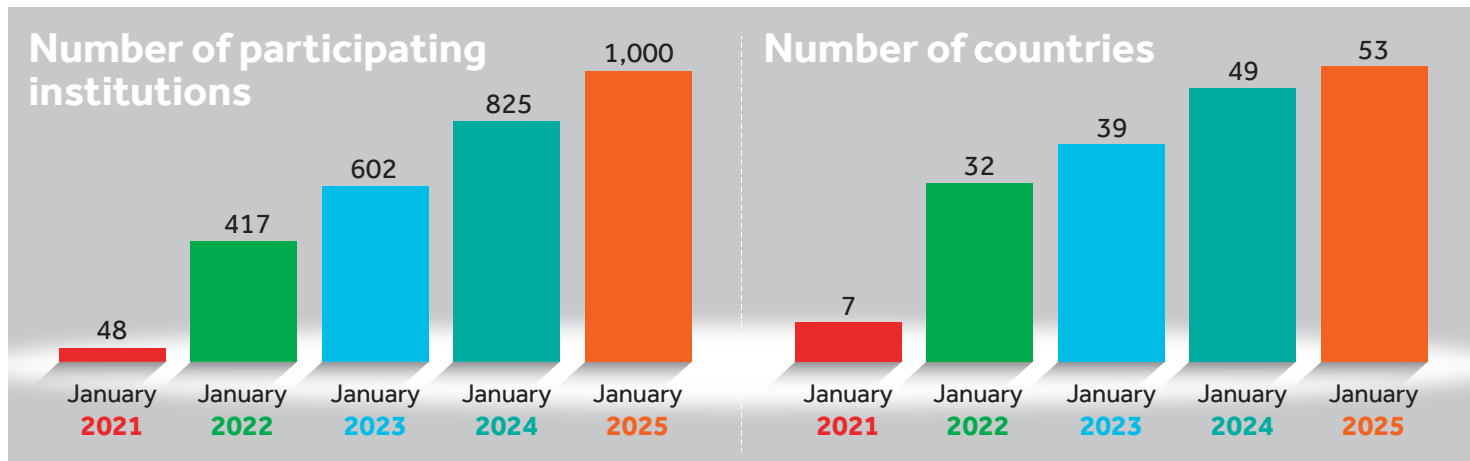

### Transformative and sustainable

Read & Publish agreements accelerate a sustainable transition to Open Access which prioritises the needs of the scientific community worldwide through broader dissemination and faster reuse of high-quality content.
